

ABSTRACT OF THE DISCLOSURE

Systems and methods are disclosed for providing user-friendly displays of data, particularly data displayed in a list. If a list item or other data is too wide to be displayed entirely in the horizontal space available in a single display area, then the data may be wrapped into an additional, separate display area. In one embodiment, wide list entries and other data are displayed by wrapping onto two or more display areas, making all the data visible to the user on the screen at the same time.
